CA 19-9 PANCREATIC CANCER MARKER

Investigation	Result	Reference Value	Unit
CA 19-9, SERUM CMIA	25	< 37.00	U/mL

Note :

1. This test is not recommended to screen Pancreatic cancer in the general population.
2. False negative / positive results are observed in patients receiving mouse monoclonal antibodies for diagnosis or therapy
3. This assay, regardless of level, should not be interpreted as absolute evidence for the presence or absence of malignant disease. The assay value should be used in conjunction with findings from clinical evaluation and other diagnostic procedures.
4. Persistently elevated CA 19.9 levels are usually indicative of progressive malignant disease and poor therapeutic response
5. The concentration of CA 19.9 in a given specimen, determined with assays from different manufacturers, may not be comparable due to differences in assay methods, calibration, and reagent specificity.

Clinical Use :

- An aid in the management of Pancreatic cancer patients
