

Yash M. Patel

Age : 21 Years

Sex : Male

PID : 555

Sample Collected At:

125, Shivam Bungalow, S G Road,
Mumbai

Ref. By: **Dr. Hiren Shah**

Registered on: 02:31 PM 02 Dec, 2X

Collected on: 03:11 PM 02 Dec, 2X

Reported on: 04:35 PM 02 Dec, 2X

C-REACTIVE PROTEIN (CRP)

Investigation	Result	Reference Value	Unit
Primary Sample Type :	Serum		
C-REACTIVE PROTEIN	89.5	High 0.0 - 5	mg/dL

Interpretation:

- Measurement of CRP is useful for the detection and evaluation of infection, tissue injury, inflammatory disorders, and associated diseases.
- High sensitivity CRP (hsCRP) measurements may be used as an independent risk marker for the identification of individuals at risk for future cardiovascular disease.
- Increase in CRP values are non-Specific and should not be interpreted without a complete history.

The level of CRP in the blood is normally low.

Increased CRP level:

A high or increasing amount of CRP in the blood suggests the presence of inflammation but will not identify its location or the cause.

- Suspected bacterial infection – a high CRP level can provide confirmation that you have a serious bacterial infection.
- Chronic inflammatory disease – high levels of CRP suggest a flare-up if you have a chronic inflammatory disease or that treatment has not been effective. *

Thanks for Reference
