

Yashvi M. Patel

Age : 21 Years

Sex : Female

PID : 556

Sample Collected At:

125, Shivam Bungalow, S G Road,
Mumbai

Ref. By: **Dr. Hiren Shah**

Registered on: 02:31 PM 02 Dec, 2X

Collected on: 03:11 PM 02 Dec, 2X

Reported on: 04:35 PM 02 Dec, 2X

PROGESTERONE

Investigation	Result	Reference Value	Unit
PROGESTERONE, SERUM CMIA	11.50 High	< 0.20	ng/mL

Comments :

Progesterone is a hormone in the body, that provides insights into reproductive health, fertility, and certain medical conditions.

Progesterone High Levels causes :

- Ovarian cyst A fluid-filled sac that forms on an ovary.
- Pregnancy The condition of carrying a fetus in the womb.
- Adrenal gland tumor A growth of tissue in the adrenal gland.
- Liver disorder A condition that affects the liver.
- Medications Certain medications, such as birth control pills.
- Cancer A group of diseases involving abnormal cell growth.

Progesterone Low Levels causes :

- PCOS A condition that affects the ovaries and can cause irregular periods, infertility.
- Early pregnancy loss The loss of a pregnancy before 20 weeks of gestation.
- Hormonal imbalance A condition in which the levels of certain hormones are not within the normal range.
- Hypothyroidism A condition in which the thyroid gland does not produce enough thyroid hormone.
- Adrenal insufficiency A condition in which the adrenal glands do not produce enough hormones.
- Medications Certain medications, such as chemotherapy drugs, can cause low progesterone levels.
- Nutritional deficiencies A deficiency in certain nutrients, such as vitamin B6, can cause low progesterone levels.
- Stress can cause a number of hormonal imbalances, including low progesterone levels.
- Age Progesterone levels naturally decline with age.
- Genetics Some people are more likely to have low progesterone levels due to their genes.
